Module 8: Handling Forms in Angular

## Assignment 1 – Create a template-driven form

edureka!

Assignment – 1:

Problem Statement

Perform the following operations to build the application:

1. Create a new component "template-form"

2. The form should display below mentioned fields:
*   Full name
*   Email
*   Phone No
*   Password
*   Confirm Password

3. In the HTML template use template-driven form directives to display the fields

4. Add the newly created component's selector tag in the main template.

5. Add a submit button which when clicked displays the details filled in the form fields.

6. Import FormsModule from '@angular/forms'

7. Make use of CSS classes and Bootstrap to design the application.

Here is an example of how your application should look:

After building the application, prepare a ZIP file of the application code and upload it on LMS in Assignment solution section for evaluation.
